PATIENT INFORMATION ABOUT MIC AND YOUR MRI

How does magnetic resonance imaging (MRI) work?

MRI currently is the most advanced method for imaging internal parts of your body. It uses a large magnet, radio waves, and a computer to create incredibly detailed pictures of your body.

The test is fairly simple. During the test, patients are asked to lie still within the magnet for about 20 to 40 minutes. You will hear a mechanical knocking sound. Magnetic scanners do not use ionizing radiation.

What about insurance coverage?

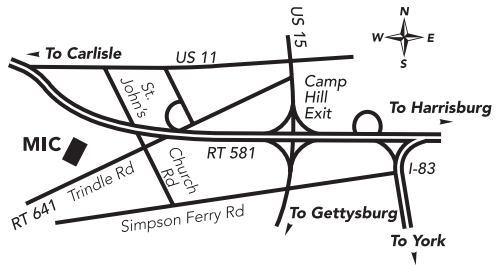

Health insurance covers the cost of most MRI examinations. Call your individual health insurance provider directly to inquire about coverage and any preauthorization requirements.

What should you bring to your appointment?

Please report approximately 15 minutes prior to the appointment time. This referral form should be presented to our office reception staff. Please bring any x-rays or CAT scan films with you. You should also bring your insurance information.

For those exams that allow it, MIC is equipped with stereo head phones, so you may want to bring your favorite music to listen to during the scan.

If you have any questions, please feel free to call our office, 717.975.0444, or toll-free, 1-888-TRINDLE.

Directions to MIC

From 81 North or South

- Take Exit 19 (Route 581 East) to Exit 3 (Carlisle Pike)
- Follow approximately 2.1 miles
